## Overcoming Academic Loss

22 March, 2020

We are all aware of the crisis that the world is passing through at present. Some countries have already suffered widespread loss of life and economy. India as a Nation has been able to contain the spread of the virus to controllable limits so far due to the proactive measures taken by our Government and the self constraint exhibited by most of our citizens. We are positive and hopeful that we will get over this calamity very soon.

On account of the prolonged closure of the College, we have already suffered few weeks of unutilized academic time that needs to be recovered. The faculty members have already started delivering online lectures, notes, assignments and supplementary study material to you through various modes. It is heartening to note that most of you have taken this move in a positive spirit and have joined the Google Classrooms where ever created.

You may note that the existing situation is undoubtedly going to shorten the semester and we may not get appropriate number of teaching days as in a normal semester. We must also understand that postponing the end semester examination by the University may not be a fruitful option as this will lead to a cascading effect on summer internships, results, placement and higher study option for final year students, commencement of the next semester and so on. With this in mind, we need to prepare ourselves to cover up the academic loss in the reduced time that is available to us.

All students are advised to take up the study material and assignments being provided by the faculty members seriously and make optimum use of this period when we are confined to our homes. Faculty, Class co-ordinators and HoDs are available on e-mail, whats app and the Google Classrooms for clearing doubts and to meet any other academic requirement.

The Scheduled second Sessional Test which got missed due to these holidays is planned to be conducted in some form in distant mode during the week commencing 30th March. Students are advised to ensure that they have done all the assignments and are well prepared for ST-2.

All students are also advised to strictly follow the advisory on social distancing issued by the Government and contribute positively in the containment of this calamity.

Best wishes for good health and productive time.
